

What is claimed is:

1           1.       A cabinet cover of a home appliance, comprising:

2           a cabinet cover body having an installation hole at a predetermined location for  
3 receiving at rear side of the installation hole a control panel for controlling the home  
4 appliance; and

5           an aesthetic member, attached at a perimeter of said aesthetic member, to the rear side  
6 of said cabinet cover body, for closing the installation hole,

7           wherein said aesthetic member is attached by an adhesive agent and wherein the  
8 perimeter of said aesthetic member is welded to the rear side of said cabinet cover body.

1           2.       The cabinet cover as claimed in claim 1, wherein said aesthetic member is  
2 larger than the installation hole.

1           3.       The cabinet cover as claimed in claim 1, wherein said cabinet cover body and  
2 said aesthetic member are made of a stainless steel based material.

1           4.       The cabinet cover as claimed in claim 1, wherein said cabinet cover body and  
2 said aesthetic member are formed using a laser cutting device.

1           5.       The cabinet cover as claimed in claim 1, wherein said aesthetic member is  
2 provided with a plurality of holes for receiving the control panel.
